

# GenAI Powered Data Analytics Job Simulation

*Tata Group, via Forage: Exploratory Risk Profiling, AI-Driven Delinquency Prediction, and Collections Strategy*

**School of Computer Science and Engineering**

IILM University, Greater Noida, U.P.

**Sushil Kumar**

Roll No.: 25SCS1003004474 | Batch: 2025–29 | Section: 2CSE37

Program: B.Tech CSE, 3rd Year | Organization: Tata Group (via Forage)

# Introduction

A B.Tech CSE report documenting the GenAI Powered Data Analytics Job Simulation, designed and provided by Tata Group and delivered through the Forage virtual experience platform. The simulation was completed in August 2026, with the Certificate of Completion issued on 25 August 2026.

It centred on four task-based modules replicating real data-analyst work in credit risk and collections — combining exploratory data analysis, AI-assisted prediction, and business-facing data storytelling.

PROVIDED BY

Tata Group

DELIVERED VIA

Forage Platform

COMPLETED

August 25th, 2026

FOCUS AREA

Data Analytics & GenAI

# Organization / Platform Profile

Tata Group

A global Indian multinational conglomerate with business interests spanning financial services, technology, and consulting. As part of its outreach to early-career talent, Tata Group partnered with Forage to offer this simulation.

Forage

A platform hosting free, self-paced virtual job simulations designed by real companies — giving students structured, practical exposure to industry-relevant tasks and realistic business scenarios, without a formal internship placement.

# Problem Statement

Identifying borrowers at risk of delinquency

Manually profiling large customer bases is time-consuming

Analysis must convert into actionable recommendations

Generative AI can accelerate analysis and reporting

AI-assisted outputs must be validated and used responsibly

# Project Objectives

## Risk Profiling

Exploratory data analysis and borrower risk profiling

## AI Prediction

AI-assisted delinquency prediction

## Data Storytelling

Business reporting and data storytelling

## Strategy

AI-driven collections strategy

## Responsible AI

Responsible use of Generative AI

# Project Scope — Four Modules

*A sequential four-module workflow — each stage builds on the outputs of the one before it.*

# Technologies and Tools

## Forage Platform

Access to task briefs, datasets, and submission workflows

## Generative AI Tools

Accelerating exploratory analysis, prediction, and report drafting

## Data Analysis

Spreadsheet/data-analysis tools for exploratory analysis and risk profiling

## AI-Assisted Prediction

Applying AI-assisted methods to delinquency prediction

## Business Reporting

Structured business report formats

## Data Storytelling

Communicating findings through narrative-driven presentation

# System Architecture / Work Process

# Methodology

1

Explore the provided dataset and identify borrower-risk variables.

2

Apply AI-assisted techniques to estimate delinquency likelihood.

3

Convert analytical findings into a business report using data storytelling.

4

Translate predictive findings into a proposed AI-driven collections strategy.

*Generative AI was used as an aid to analysis, prediction, interpretation, and communication — within the guided structure provided by Forage and Tata Group.*

# Expected Outcomes & Key Learnings

## OUTCOMES

- ✓ Completion of exploratory data analysis and borrower risk profiling
- ✓ Application of AI-assisted delinquency prediction
- ✓ Development of business reporting and data storytelling
- ✓ Proposed AI-driven collections strategy

## SKILLS DEVELOPED

- ★ Practical exposure to data analytics and Generative AI
- ★ Improved analytical thinking and interpretation
- ★ Stronger problem-solving skills
- ★ Better business communication

# Certificate of Completion

# Conclusion

- Practical exposure to data analytics and AI-assisted business problem-solving
- Understanding of credit risk and collections
- Experience with exploratory analysis and delinquency prediction
- Experience in business data storytelling
- Understanding of AI-driven collections strategy

---

THANK YOU
